PROFILE SUMMARY

Software Engineer with hands-on experience building agentic AI systems using LangGraph, LangChain, CrewAI, and AutoGen, alongside enterprise .NET development with ASP.NET Core, C#, and SQL Server. Skilled in multi-agent workflows, RAG pipelines with vector databases, LLM integration via REST APIs, and AI security guardrails (prompt injection, data leakage, tool misuse), with working knowledge of SOC workflows, vulnerability management, and GRC frameworks.

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning **(2021 – 2025)**
Mangalam College of Engineering, India

EXPERIENCE

Software Developer – I [.NET Full Stack]

UST Global | May 2026 – Present

- Completed an intensive 3-month .NET Full Stack training program covering ASP.NET Core Web API, Angular, Blazor WebAssembly, Entity Framework Core, SQL Server, and AWS deployment, and built the HealthAxis capstone project applying Layered Architecture.
- Allocated to a client project, performing functional and API testing, defect reporting, and fix validation while completing knowledge transfer on its architecture and workflows.

PROJECTS

Aegis-SOC – Agentic AI Security Operations Platform

- Built a multi-agent AI security platform orchestrating six specialist agents across LangGraph, CrewAI, and AutoGen to automate the vulnerability management lifecycle, integrating open-source LLMs (Groq, OpenRouter) via REST APIs.
- Designed a RAG system (ChromaDB, embedding models, overlap-based chunking) to enrich findings, and engineered a Security Scanner Agent integrating Trivy, Nmap, Nikto, and OWASP ZAP mapped to NIST CSF, CIS, and ISO 27001.
- Implemented AI security guardrails (prompt-injection detection, PII/secret redaction, tool allow-listing) and integrated SOAR/ticketing (ServiceNow) over REST via a FastAPI backend with a Streamlit + Pandas analytics dashboard.

AI-Powered IT Helpdesk Agent – Multi-Agent Support Automation

- Built an AI agent in .NET with Semantic Kernel that resolves IT requests through LLM tool calling against real Keycloak and Docker APIs, using Clean Architecture and an Angular frontend.
- Designed a risk-tiered guardrail layer with function-invocation filters — high-risk actions pause for human approval, with prompt-injection detection, secret redaction, tool allow-list, and separation of duties.

Agentic Wikipedia RAG Chatbot

- Built a fully local Retrieval-Augmented Generation system using LangChain, LLaMA 3.2, and mxbai embeddings to answer questions strictly from user-ingested Wikipedia topics, minimizing hallucinations through grounded retrieval.
- Designed an agent-driven workflow that dynamically ingests new topics, retrieves relevant context, and generates grounded responses.

HealthAxis – Healthcare Appointment Management System

- Developed a full-stack healthcare appointment system using ASP.NET Core 10 Web API, Angular 21, Blazor WebAssembly, Entity Framework Core, and SQL Server, following Layered Architecture and the Repository Pattern.
- Implemented secure RESTful APIs with JWT Authentication, Role-Based Authorization, and ASP.NET Identity, and improved performance using Redis caching and RabbitMQ with MassTransit.
- Deployed on AWS Elastic Beanstalk and EC2 with Jenkins CI/CD, SonarQube code quality checks, and Serilog logging.

SKILLS

Languages: Python, C#, SQL

Agentic AI & LLMs: LangGraph, LangChain, CrewAI, AutoGen, Semantic Kernel, Multi-Agent Systems, Tool Calling, RAG, Prompt Engineering, Conversational Memory

RAG & Vector DBs: ChromaDB, Embedding Models, Chunking Strategies

AI Security & Guardrails: Prompt Injection Defense, Data Leakage Prevention, Tool Misuse Protection, PII/Secret Redaction

Cybersecurity: SOC Workflows, Alert Triage, Vulnerability Management, WAF Rule Logic, GRC (NIST CSF, CIS, ISO 27001), Trivy, Nmap, Nikto, OWASP ZAP

Data Analytics: Pandas, NumPy, SQL, Data Visualization

Backend: ASP.NET Core Web API, Entity Framework Core, FastAPI, REST APIs, JWT Auth

Frontend Technologies: Angular, Blazor, Streamlit

Database: Microsoft SQL Server

Database & Tools: SQL Server, Git, GitHub, Docker, Visual Studio, VS Code, Swagger, Postman, SonarQube

CERTIFICATES

Full stack generative and Agentic AI with python — Udemy **(March 2026)**
